

ASIC design Project Leader

[Apply Now](#)

Company: ICsense NV

Location: Leuven

Category: computer-and-mathematical

The job location can be Leuven or Ghent.

The project leader's role is to technically manage IC design and supply projects to ensure technical quality and timely delivery.

Responsibilities

Be the technical lead for an entire project, taking into account customer milestones and making sure technical specifications and quality standards are met:

Daily follow-up of all project team members: designers, layouters, testers

Support and coach team members with technical expertise and strong problem solving skills

Maintain detailed overview and knowledge of the complete mixed-signal development

Organize, lead, attend internal status meetings to keep abreast about the project progress

Be the technical point of contact for the customer

Write the IC design specification and ensure a timely update in case of customer change requests

Ensure compliance with all safety and quality standards

Closely work together with and report potential problems on time to the Project Manager

Competences

You are a dynamic and highly motivated engineer in micro-electronics

You have at least 5 years of relevant industrial work experience

You are an experienced user of the mixed-signal flow of Cadence and/or Synopsys and Matlab

You have strong communication and reporting skills, also in English

You demonstrate excellent analytical and problem solving skills

Our offer

The job location can be Leuven or Ghent

An attractive salary package with a variety of extra benefits

A stimulating and pleasant working environment with regular team activities

A financially healthy company with growth potential

Chance to participate in temporary assignments abroad

Possibility to continuously learn and grow through in-house and external trainings
