About Brussels Airlines

Brussels Airlines, part of the Lufthansa Group, is the national airline of Belgium with its home base at Brussels Airport.

Our mission is to be the most reliable airline, making everyone feel at home.

We are passionate about what we do, whether it's on board, in an office, in the hangar or at an airport. Our people are recognized for always going above and beyond and for constantly challenging themselves.

Purpose of the position

Within the CAMO department, you will be active as a Cabin Project Manager.

You will be responsible for the project management of a large cabin engineering project related to the renewal of Brussels Airlines A330 longhaul cabin.

You will develop and maintain a project plan in accordance with the business case.

You are responsible to deliver the project on time and within the assigned budget.

You will motivate your team and coordinate the project between the different stakeholders.

You will report on regular basis the project status to higher management.

Main tasks & responsibilities:

You will be involved during scope definition of the A330 longhaul cabin together with product and marketing.

You will execute the project management of the A330 longhaul cabin renewal.

You will set up a project planning and play a lead role in steering the project for planning, execution and progress monitoring.

You will set up a financial follow-up method to monitor the defined project budget.

You will work with the dedicated A330 longhaul Cabin Project engineer and will motivate the project engineer during the project from A to Z.

You will be the main contact for other Brussels Airlines departments (marketing, product, purchase, logistics, ...) related to the project.

You will be in contact with aircraft manufacturer, STC providers, OEM's, MRO's & BCAA.

Analysis and implementation of STC and P21 modification packages, discuss with STC and P21 holders for cost effective solutions.

You will follow-up and monitor the implementation of the project during heavy maintenance checks on site.

Review implementation issues and propose solutions for quick and cost efficient corrective actions to not endanger the project budget and leadtime.

You ensure that the changed aircraft configuration is correctly processed to allow a flowless usage of the cabin at maintenance and engineering department during the operations.

You will be responsible for the implementation of the continued airworthiness management tasks related to your project.

You will be part of the dedicated project team on Brussels Airlines level which is reporting on regular base to different levels including management board.

Your profile

Minimum master degree in Aeronautics engineering or equivalent by experience

You have proven project management experience in large projects
