

## Calibration Specialist (Technieker)

[Apply Now](#)

Company: SABCA

Location: Brussels

Category: other-general

Are you one of those people who look up to the sky every time a plane passes by?

Space holds no more secrets for you than it does for science?

Environmental and technological challenges are among those you wish to tackle?

**Come join Sabca** and play your own role in the fast-moving world of aerospace inside a company with more than years of existence.

We are experts in designing, manufacturing, maintaining, and upgrading large and complex elements for aircraft and space launchers.

In Brussels, we have our Structural and Mechatronics Engineering offices, where all our new programs begin and our workshops are equipped with modern

machines that produce complex metallic assemblies for aircraft and space launchers as well as advanced Thrust Vectoring Systems for space launchers.

SABCA Brussels is also the home to our Unmanned Autonomous Systems aka: the drones solutions unit!

### **Mission**

As a calibration specialist, you are responsible for the calibration of physical and electromechanical measuring instruments as well as for the calibration of baths and ovens for production. You track calibrations by consulting the SAP database and generate measurement reports.

### **Tasks:**

Calibration of devices for physical measurements (e.g., force, torque, hardness, pressure, temperature,...)

Calibration of devices for electrical measurements (e.g., current, voltage, resistance,...)

Calibration of baths and ovens (according to AMS: SAT, TUS, instrument calibration)

Performing calibrations, tracking, and generating measurement reports.

Analysis of technical specifications and standards.

Analysis and validation of internal and external measurement reports.

Representing SABCA as a calibration specialist during audits.

Collaborating and taking responsibilities at his/her level regarding the EN quality standard and the ISO environmental standard.

### **Profile:**

- Knowledge of classical measurement techniques.
- Excellent computer skills (e.g., Excel, SAP, preferably basic knowledge of networks).
- Ability to follow strict procedures with precision.
- Analytical mindset and ability to detect errors in data.
- Good communication skills, both written and oral.

### **Education and Experience:**

- Higher education diploma (Bachelor's degree in a technical field) or equivalent experience.
- Previous experience in a calibration environment is a plus, preferably in the aviation industry or a related industry.

### **So, What's in it for you?**

**Experience!** Gain new experience to thanks to the full range of services we offer to the civil, space and military aviation markets as well as to the commercial

Unmanned Autonomous Systems (drones). Our activities include designing, manufacturing, maintaining, and upgrading large and complex elements for aircraft and space launchers for customers and partners belonging to the elite of the aerospace industry.

**Excitement!** Work in an exciting environment where long-standing expertise and research and technological development feed off each other.

Sabca collaborators have their passion and their know-how as common denominator.

Teamwork, reliability and innovation are part of the culture we value and that lead us to success.

**Challenges!** Help Europe access to space by designing and manufacturing rocket structures. Be part of the pioneers in developing advanced air mobility solutions inside our division dedicated to drones. Use your knowledge to take people around the world on board low-carbon aircraft.

Contribute to the environmental and technological challenges of the century. Play your own role in the fast-moving world of aerospace.

**Be ready for take-off!**
