

Database Analyst / Database Administrator III

[Apply Now](#)

Company: T.D. Williamson

Location: Nivelles

Category: computer-and-mathematical

Overview

As a Database Analyst for T.D. Williamson, your team will be expanding the role of our Enterprise Data Warehouse to promote business intelligence and provide consistent global reporting. You will be responsible for developing high quality extraction/transformation/load (ETL) programs, creating logical and physical data models, data flow diagrams, entity relationship diagrams and building business intelligence reports using SQL Server, SQL Server Integration Services (SSIS) and Report Services (SSRS) and PowerBI. As a Database Analyst for T.D. Williamson, your team will be expanding the role of our Enterprise Data Warehouse to promote business intelligence and provide consistent global reporting. You will be responsible for developing high quality extraction/transformation/load (ETL) programs, creating logical and physical data models, data flow diagrams, entity relationship diagrams and building business intelligence reports using SQL Server, SQL Server Integration Services (SSIS) and Report Services (SSRS) and PowerBI.

Responsibilities

Design, develop, test, implement and manage complex ETL processes sourcing data from a variety of internal and external systems supporting Manufacturing, Distribution, Sales, Marketing, Finance and Human Resources

Advanced knowledge in database and report performance engineering, diagnosing and tuning of ETL programs and reports

Advanced understanding of data warehouse concepts such as star schemas, snow flake schemas, operational data stores, data warehouses and data marts

Design, develop, maintain and publish logical and physical data models, entity relationship diagrams and a common data dictionary

Track record of building and maintaining solid relationships with internal and external customers, vendors and peers

Works collaboratively with key business users to understand their information needs and provide high quality, high performing and intuitive data solutions

Self-motivated, able to work independently and collaboratively with IS peers and managed service providers to identify, understand and analyze complex data in a variety of source systems such as: ERP, WMS, CRM, E-Com, HRMS, etc.

Strong organization and prioritization skills. Comfortable creating high level plans, setting dates, making commitments and delivering high quality results on time

Comfortable assisting in the design and development of reports, charts and graphs

Comfortable operating as a subject matter expert, leader and mentor to improve the knowledge, skills and capabilities of DW/BI throughout the company

Participates in the evaluation of new business intelligence technologies such as data modeling, ETL, appliances, reporting tools and portal solutions

Participation on-call duties is required

Experience

Bachelor's degree in Computer Science, Information Technology, Engineering or related field is strongly preferred; minimum of Associate's degree is required

3 - 5 years of experience using Microsoft SQL Server Database, SSIS, SSRS is required

Experience with other relational databases, BI reporting and data discovery tools is highly desirable
