

Post-doc in Neurosymbolic AI

[Apply Now](#)

Company: KU Leuven

Location: Leuven

Category: computer-and-mathematical

The candidate must have a PhD in Computer Science or Artificial Intelligence. Experience that relates to neurosymbolic AI, or at least its ingredients is expected.

Candidates must have excellent programming skills, be proficient in oral and written English, possess excellent communication skills, multi-tasking skills, and be team-oriented, proactive and result driven. The post-doc will work on research projects that involve frequent interactions with both internal and external researchers.

The positions can start immediately, and positions will be filled as soon as suitable candidates are found. Interested candidates should send their CV, their transcripts, contact information of 2 or 3 referees, and a motivation letter using the KU Leuven system. The motivation letter should clearly outline the interests in neurosymbolic AI and/or the past experience in neurosymbolic AI.

The group of Luc De Raedt has openings at both the PhD- and post-doc level in neurosymbolic AI, which combines probability, logic and neural networks with the goal of supporting both data and knowledge, learning and reasoning. Neurosymbolic AI is one the next frontiers in AI and it is enjoying a lot of attention these days.

The Declarative Languages and Artificial Intelligence (DTAI) Section of the Department of Computer Science of the KU Leuven is a leading research group for artificial intelligence, machine learning and data science. It is internationally renowned for its pioneering work on the integration of learning and reasoning, in domains such as statistical relational and neurosymbolic AI, probabilistic and inductive programming, logical and relational learning and

their applications. In addition to fundamental research, the DTAI group applies the developed techniques to concrete cases situated in data science, sensors, sports analytics, combinatorial optimisation, robot manipulation and navigation, natural language processing, smart electronics, computer vision, etc. For these applications, DTAI often cooperates with other groups and companies from strategically chosen research areas.

A full time post-doc scholarship of 1 year, extendible until max. 3 years.

A stimulating environment at Europe's most innovative university, in a well-equipped, experienced and internationally oriented research unit.

The research will be based at the Department of Computer Science at the Arenberg Campus in Heverlee (close to the center of Leuven).
