

Project Automation Engineer

[Apply Now](#)

Company: Honeywell

Location: Machelen

Category: computer-and-mathematical

Innovate to solve the world's most important challenges

Contribute to the growth of the **Honeywell Process Solutions** Service business by providing accurate and efficient technical support to external customers as well as internal within Honeywell systems maintenance and service on Honeywell Process Solutions systems.

Actively working on all aspects of our **Honeywell Process Solutions systems** for short- and long-term **DCS engineering projects** as well assigned corrective and preventive maintenance activities for our customers.

We are looking for new team member to our experienced team for role of **Project Automation Engineer** with focus on hardware design and installation. If you are interested in this opportunity, don't hesitate to contact us!

RESPONSIBILITIES OF THE POSITION:

- Develop sound and honest relationships with internal and external designated customers by providing accurate and efficient technical support.
- Respond to customer inquiries by diagnosing the issue and providing the most appropriate technical solution.
- Keep technically current with the broad HPS product portfolio.

- Provide solutions to both legacy and new systems, as appropriate.
- Respond to customer questions, issues, and inquiries with accuracy and timeliness.
- Design system cabinets, marshalling cabinets, server cabinets.
- Perform power & heat calculations using Honeywell tools.
- Work effectively with other groups within Honeywell to provide customers with the most effective solutions.
- Design hardware Bill of Materials for our projects.
- Perform sites surveys to provide proper solution and Bill of Material.
- Order hardware components involved in projects. Follow up on hardware orders with 3rd party suppliers as well as internal.
- Be part of different projects for hardware upgrades, system modifications and additions, both on-line and off-line.
- Commission hardware at site.
- Participate in projects during Engineering, Factory Acceptance Test (FAT), Site Acceptance Test (SAT) and commissioning phases as required.

KEY SUCCESS FACTORS:

Key Industrial / Technical Knowledge / Expertise

- Keeping pace with new product development, while at the same time maintaining expertise in the old systems, and in the interfaces/upgrades between the old and new systems.
- Knowledge on industrial automation, preferably DCS.
- Maintaining a highly satisfied customer base.
- Working and managing multiple issues at a time.
- Responding to customer inquiries in an efficient and accurate manner.

ATTRIBUTES / SKILLS REQUIRED / SOUGHT

Generic Competencies:

- High interest in technology and its evolution, hardware and software (IT)
- Team player
- Communication capabilities
- Self learner

- Aware of personal qualities and limitations

EXPERIENCE / EDUCATION REQUIRED / SOUGHT:

- Minimum a bachelor's degree in electronics, automation or process technologies.
- 2-3 Years experience in the system engineering, project engineering, execution, operations or maintenance functions within the industrial automation industry.
- Strong diagnostic and analytical skills.
- AutoCad
- Effective, honest communications capabilities (good written and verbal skills).
- Fluent in Dutch and English (verbal & written). French will be a plus
- Customer Service orientation

If this is your dream role, then we'd love to hear from you.
