

Senior Test Development engineer with Image Sensor experience

[Apply Now](#)

Company: Chipright

Location: Belgium

Category: architecture-and-engineering

Senior Test Development engineer with Image Sensor Experience Chipright are looking for a Senior IC Test Engineer for our Belgian customer who will be the system engineer that designs, debugs and validates a test solution for production testing of a range of CMOS Image sensor products. You will get to ensure the appropriate balance between cost, quality and timing. Your test solution will ensure specifications are fully met and will include, but not be limited to;

- Ensure the test solution robustness for sustainable manufacturing
- Define and validate the hardware (PCB)
- Architecture and implement the software (test program) needed for the test solution
- Cooperate with the design team to ensure the optimal test coverage and DFT/DFM
- Provide status and test solution performance with statistical methods to the project management team and support other test engineers in projects
- Knowledge of Teradyne J/IP750 and IGXL
- Knowledge of software development (C/C++, python, Java)
- Knowledge of FPGA architecture and VHDL coding would be an added asset
- Knowledge of measurement techniques is an asset
- Previous knowledge of Image testing would be distinct advantage.
- Able to work in a fast paced solutions driven environment essential
- Effective communication skills in English
