

Software Signalling System Engineering h/f (m/w/d)

[Apply Now](#)

Company: emagine Consulting

Location: Belgium

Category: computer-and-mathematical

Join the Charleroi ETCS Team to develop a generic software for our client, innovating expert in the rail industry.

As Software Signalling System Engineer working with a team of 40 internationals engineers, you will deliver a configuration tools for the future rail world:

Requirements

- Defining software Signalling System - Analysis of requirements - Definition of Signalling system design specification / documentation with particular reference to overall Signalling Architecture.
- Signalling system functionalities and principles, including the verification activities of the documents related to the technical integration for all the Signalling Subsystems.
- Perform Gap Analysis with respect to standard solution in term of Signalling System functionalities and identification of requirements to be apportioned to signalling subsystems.
- Execution of Signalling System tests on site. Participate to Signalling Factory Acceptance test for what concerns main signalling equipment

Competences

- Engineering Degree (BAC) in Electronics, Telecom, Automation, Electricity, Robotics or in another similar technical specialty
- Expert in Complex System Engineering – SysMI
- Comfortable knowledge of Multitier architecture
- Fluent in English, and fluent in contract language
- Good co-ordination and communication – Team oriented

- Ability to challenge subsystems solutions for a global optimization

Benefits

- A customizable contract that respects your expertise
- A work schedule that adapts to your family life in a hybrid setting.
- Personalized support that allows you to maintain your autonomy while benefiting from a certain level of stability

Anthony Baba - Partner Manager at emagine
