Technical Architect Cloud & Data Center

Apply Now

Company: Ypto

Location: Bruxelles

Category: computer-and-mathematical

As a Technical Architect Cloud and Data Center you are responsible for these technology domains within the company.

You are responsible for communicating, researching, planning, improving and governing the Technical Architecture of SNCB, mainly by working on reference architectures (by creating building blocks) for business projects (by supporting the Solution Architects), and enhancements on both (by modifyingbuilding blocks and maintaining roadmaps).

Your main tasks and responsibilities are:

Provide technical leadership and insights for the technologies that have been identified / required as part of a solution (to Solution Architects)

Have a hands-on approach applying IT best practices and architectural standards to follow

Provide expertise in your disciplines and areas

Maintain roadmap for product components per technology area

Coach, guide and support implementation team, working closely with our external partner

Validate and provide feedback on detailed designs

Document the environment using Archimate in SparX following the defined metamodel

Translate application requirements into cloud and infrastructure architectures

Elaborate roadmaps and business cases

Vereisten

Master degree or equivalent through experience

At least 8 years of relevant experience as Technical Architect

Good knowledge of English and Dutch or French (preferably with at least a passive knowledge of the second language)
