

VMWare Engineer

[Apply Now](#)

Company: Euroclear

Location: Belgium

Category: computer-and-mathematical

Division: Group Technology Services (GTS)

About the team:

The Group Technology Services (GTS) plans, builds and runs the global infrastructure of Euroclear, and is additionally responsible for the IT service management to the operating entities of the various Group markets. GTS operates its IT systems and IT services in such a way that, at an appropriate and benchmarked cost level, it can deliver the agreed levels of service to support the requirements of the business processes, for both normal operations and during disaster recovery.

The Virtual Infrastructure Services team is committed to bring the best computing experience to our Euroclear internal clients (platforms, office and business applications) via innovative virtualized services through its Converged and Hyper-Converged infrastructures.

About the role:

We are looking for a hard-working new member for our “**Virtual Infrastructure Services**” team that wants to share their passion for IT technology and automation with the team.

This position is centered on the management, support and evolution of the Converged (Vxblock) and Hyper-Converged (Nutanix) infrastructures, Storage Area Network, Backup and Archive Solutions and Hypervisor technology (VMWARE) in a 24/7 production environment.

One of the primary goals of the Compute virtualization engineer role will be to design and build automation solutions for the virtual infrastructure services offered by the team in order to reduce manual efforts and increase team efficiency.

Responsibilities:

Write/Troubleshoot scripts to automate the virtual infrastructure services

Design, document, test and implement automation workflows. Perform flow maintenance once the solution is up-and running in production.

Define and maintain standards for automation and orchestration within the team

Propose harmonization of existing automation developments.

Ensure existing automation flows are accommodated to satisfy new work requests.

Support and align with the Infrastructure as a Code approach

Create solutions based on REST API

Participate in the Day-to-Day service support (incident, alerts, changes, ...);

Provide on-call support during out-of-business hours (24/7 watch duty);

Take part in the disaster recovery management for the virtual infrastructure (RDR, SWAP, LDR, ...);

Offer consulting services to “OS” teams (Windows, Linux, Office, Tandem, Mainframe), projects and other customers

Support the private cloud strategy in the organization.

Requirements:

You are passionate about automation and DevOps

Minimum of 3 years of experience in software development, service engineering or service operations

Knowledge and experience in Ansible & Tower and PowerShell

Hands-on technical experience creating process automation scripts using Python, REST APIs

Experience with management of VMware virtualization environments

Experience with Nutanix hyper-converged infrastructures is a plus

Experience with converged infrastructures (Vxblock) is a plus

Experience with storage infrastructure management (VMAX, VNXe, SRDF, CLOUDIQ) is a plus

You are fluent in English, knowledge in French or Dutch is a plus

Working experience in an agile context

Drive and energy, entrepreneurial demeanor, hands-on mentality

Open to work in a fast moving technical and human environment

Able to quickly diagnose system problems and implement solutions to restore functionality

Continuing to perform efficiently during difficult situations with high pressure;

Be analytical

Good collaborator with others as part of larger team;

Open to change and evolution;

Be able to work with strict deadlines and handle complex situations.
